Hazardous Weather

Hazardous Weather

The chance for seeing severe thunderstorms today in the Texas Panhandle will be quite low, only about a 10-15% chance in portions of the far southeast Texas Panhandle. If we can get a severe thunderstorm however, large hail and damaging winds will be possible. If your travels take you into SW Oklahoma or going southeast of the Texas Panhandle into northwest Texas, your chances for severe thunderstorms may increase.

Severe thunderstorms will be possible across the Rolling Plains this afternoon and evening. Initial storms will pose a threat for very large hail up to baseball size, before storms merge and grow into a complex. Large hail will still be possible after the thunderstorm complex forms but a focus on wind-damage will develop with the potential for damaging winds between 60-70 mph, and gusts up to 75 mph will be possible as well. Torrential rainfall is also expected to accompany storms today, resulting in a threat for localized flash flooding.

Hazardous Weather

Elevated Fire Weather

Today

Weather Forecast Office
Midland/Odessa, TX
Issued May 7, 2023 3:16 AM CT

Elevated fire conditions exist once again this afternoon for all locations except the far eastern Permian Basin and Terrell County. If you see smoke or fire, report it immediately and continue to practice fire safety by not creating unnecessary outdoor sparks/flames and properly disposing of cigarette butts.

Warm and Breezy

Sunday Afternoon Highs

Weather Forecast Office
El Paso, TX
Issued May 06, 2023 6:47 PM MDT

It will be another warm and breezy day across the Borderland.

Hazardous Weather

Severe Timing Today

Severe storms are possible within the time frame.

Weather Forecast Office
Norman, OK

Issued May 07, 2023 8:27 AM CDT

Timing of Severe Weather	
Earliest Start	4 PM
Most Likely	5 PM - 9 PM
Ending By	10 PM

Timing of Severe Weather	
Earliest Start	6 PM
Most Likely	7 PM - 9 PM
Ending By	10 PM

NWSNorman

weather.gov/norman

Severe thunderstorms are possible as early as 4 PM across western north Texas and as early as 6 PM for parts of southwest Oklahoma. The most likely time, however, is a bit later and is expected within the 5 PM to 9 PM time frame.

Today: More Afternoon and Evening Storms

Main Threats: Large Hail, Gusts 60-70 mph, & Isolated Flash Flooding

Weather Forecast Office
Fort Worth, TX

Issued May 7, 2023 3:42 AM CT

If storms develop, they could become **strong to severe**.

Threats:

Timing:

Afternoon - Late Evening

Area of greatest concern for severe storms

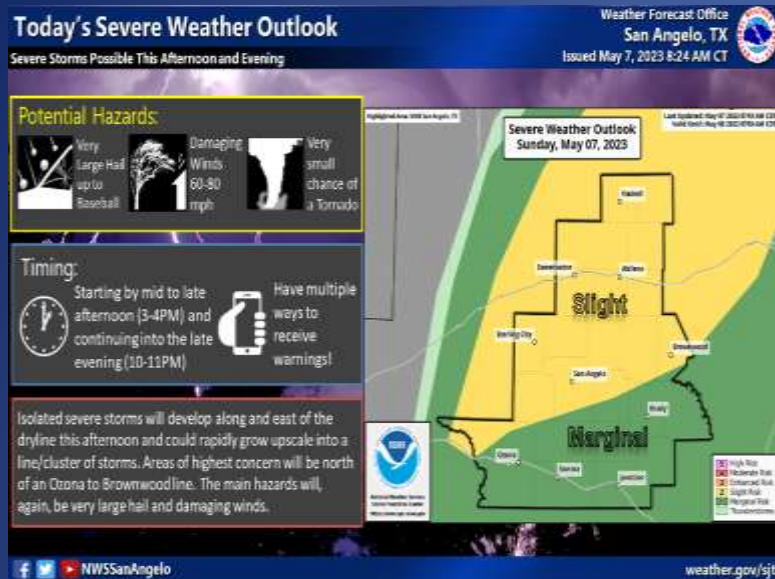

NWSFortWorth

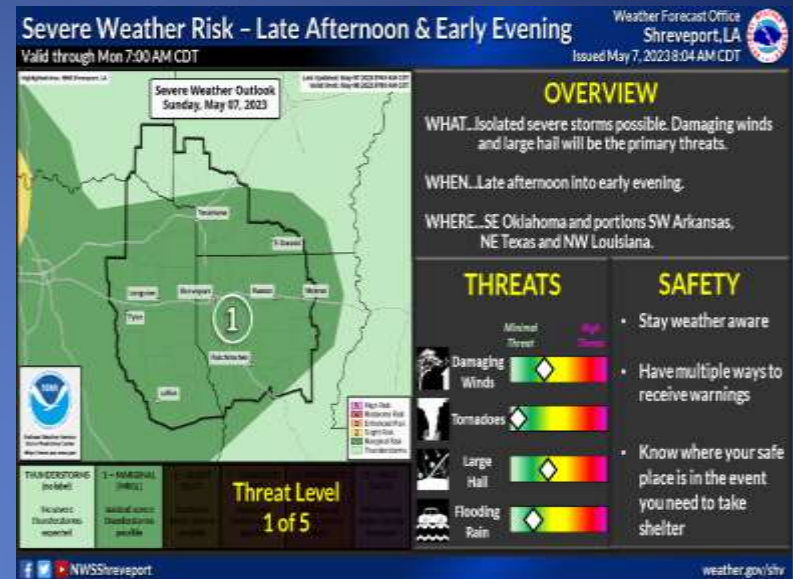

weather.gov/fortworth

Another round of strong to severe storms will be possible across especially western portions of North and Central Texas later today and this evening. Primary threats will remain similar as in the past several days with large hail and damaging winds the primary threats. While the tornado threat is low, a brief tornado can't be ruled out. Areas that have seen heavier rainfall the past 3 days may see an isolated instance of flooding if more heavy rainfall occurs over saturated soils.

Hazardous Weather

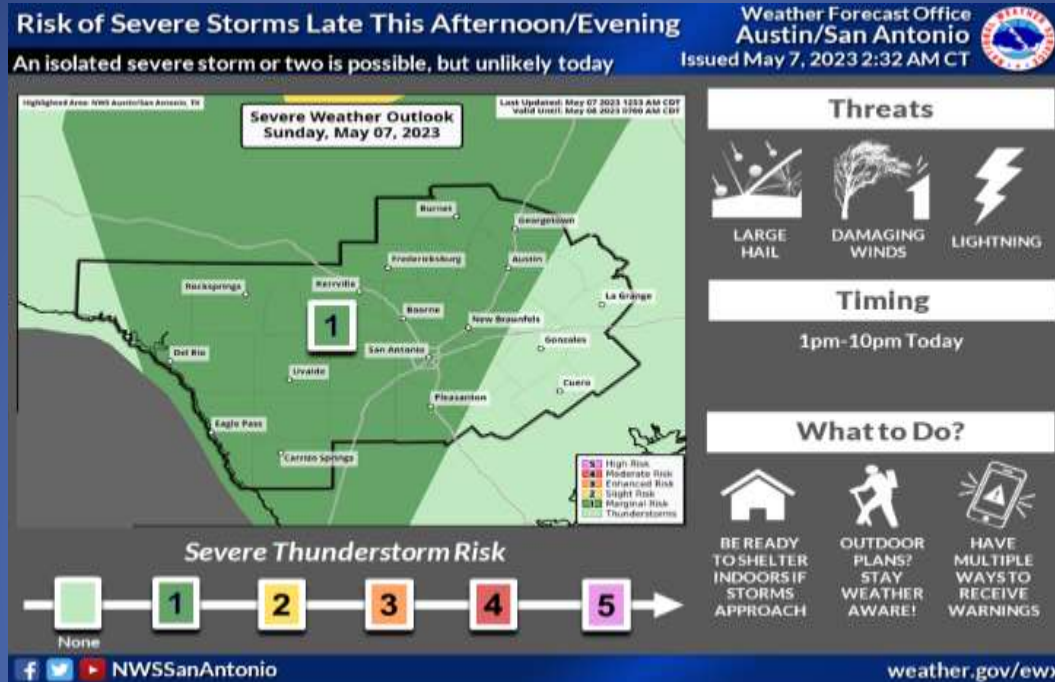

Another day of activity along the dry line will be the main highlight with large hail and damaging winds being the main concern. However, an isolated tornado cannot be ruled out.

Update to the Day 1 severe weather outlook this morning now includes a marginal risk of severe storms for later this afternoon and evening. Damaging winds and large hail remain the primary threat.

Hazardous Weather

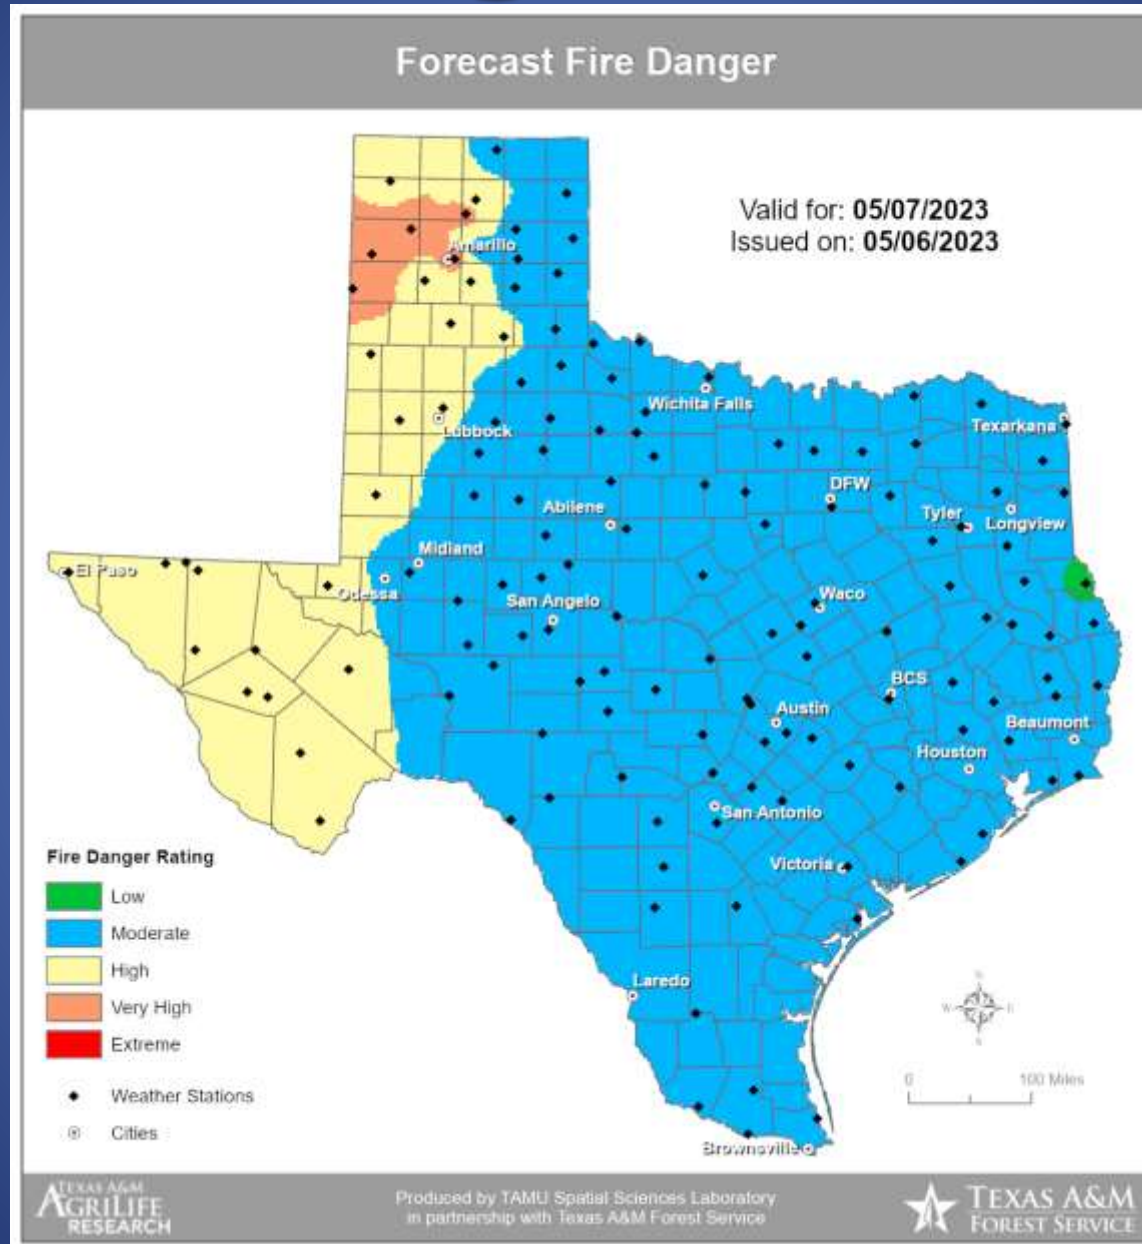

Scattered showers and thunderstorms will be possible during the day today. While most areas will not see severe weather, there is a Marginal Risk of a couple storms becoming severe. Per SPC definitions, there is a 5% chance of damaging wind gusts or large hail within 25 miles of any point in the risk area today.
